SUBJECT INDEX

Adsorption 51
Alloy 93, 483
Aluminum
– antimonide 367
– oxide 25
Apparatus
– for melt growth
– – by Bridgman–Stockbarger method
– – – of copper indium eutectoid 85
– for solution growth
– – by flux method
– – – of calcium oxide 459
– – by low temperature method
– – – of sparingly soluable crystals 61
– – – of larger crystals 563
– – by screened seeding method
– – – of sparingly soluble crystals 61
– for thin film growth
– – by liquid phase epitaxy
– – – of laser material 41
– – by sputtering
– – – of metals 1
– – by vapor phase epitaxy
– – – by chemical vapor deposition
– – – – of aluminum antimonide 367
– – – – of silicon 644
– for vapor growth
– – by chemical transport
– – – of cadmium germanium phosphide 479

Band gap list 611
Bismuth
– antimony 483
– germanate ($Bi_{12}GeO_{20}$) 530
– silicate ($Bi_{12}SiO_{20}$) 530
Boundary layer control 394
Burton–Cabrera–Frank (BCF) theory 9, 489
Burton–Prim–Slichter (BPS) theory 363, 435, 451

Cadmium
– arsenide 387
– germanium phosphide 479
– iodide 107
– telluride 29
Calcium
– oxide 459
– sulphate, dihydrate 34
Cesium
– tin halides 155
Characterization methods
– by Auger spectra 644
– by chromatography 191
– by density 334
– by elastic modulus 343
– by electrical methods 74, 155
– by electron diffraction 202, 367, 644
– by electron microscopy, 1, 9, 34, 100, 121, 191, 202, 210, 227, 240, 250, 259, 303, 321, 343, 367, 387, 514, 576, 621
– by fluorescence spectra 41
– by infrared absorption 259
– by infrared spectroscopy 74, 334, 343
– by magnetization 114, 131
– by mechanical tests 334
– by neutron diffraction or scattering 169, 574
– by optical methods 334
– by optical microscopy 19, 34, 149, 155, 184, 191, 210, 227, 343, 355, 403, 425, 459, 469, 475, 479, 486, 493, 621
– by piezoelectricity 343
–by Raman spectroscopy 343
– by tensile strength 574
– by thermal methods 184, 191, 227, 240, 343
– by thermal shrinkage 321
– by ultrasonic measurements 343
– by X-ray techniques 29, 34, 41, 85, 100, 114, 141, 149, 155, 184, 191, 202, 227, 240, 257, 283, 295, 334, 343, 355, 367, 425, 475, 479, 491, 493, 514, 574, 683
Computer modelling 563
Computer simulation; Monte Carlo method 9, 25, 582, 635
Convection 25, 74, 435, 451, 600
Copper 84
–indium 84
Crystal engineering 505
Crystallizer
– Arkenbout column for melts 503
– Brodie purifier 563
– Escher–Wyss–Tsukiskima 563
– crystallization of ultraviscous melts 563
– fractional crystallization from solutions 563

Dendritic growth 93, 121, 202
Diffusional control 74, 394, 411, 435, 451, 489, 621, 635
Dislocations 9, 19, 29, 107, 141, 321, 403, 425, 582, 683
Dissolution 202
Distribution coefficient 74, 131, 363, 379, 435, 451, 635

Electrochemical process 548
Energy conservation materials 548

Energy storage materials 548
Etching
– chemical 19, 169, 383, 403, 469, 483, 514
– thermal 240
Eutectic 85, 141, 611

Fluoroperovskites 475
Fuel cells 548

Gadolinium
– gallium garnet 19
Gallium
– arsenide 644, 655
– indium arsenide phosphide 359
Garnets 19, 131, 621
Glasses
– phosphates 589
– silicates 589
Graftonite (manganese) 473
Grain boundary 283, 303
Gypsum 34

Heat flow control 394, 416

Ice 121
Impurity 74, 283, 379, 435, 451, 514, 635, 666
Inclusion 19
Indium
– gallium arsenide phosphide 403
– phosphide 403
Instrumental techniques for analysis of electronic materials 666
Interface 74, 283, 303, 379, 383, 416, 469, 489, 644
Ionic conductors fast 548
Ion implantation 655

Kinetics
– of dissolution 464
– of growth 9, 34, 41, 93, 149, 169, 210, 227, 250, 343, 363, 411, 425, 435, 451, 464, 489, 514, 574, 589, 621
– of melting 227
– of nucleation 210, 387, 587

Lasers 41, 655
Lattice mismatch 41, 403
Lead
– chloride 149
– tin telluride 383
Lithium
– ferrite aluminate 114
– gadolinium molybdate 355
– niobate 530
– tantalate 530

Macromolecules 169, 184, 191, 202, 210, 240, 250, 259, 283, 295, 303, 321, 334, 343
Magnesium
– silicate 469
Marangoni convection 600
Materials, new
– for electronic devices 505
– for energy devices 548
– for SAW devices 530
Melt growth
– by Bridgman–Stockbarger method
– – of copper indium eutectoid 85
– – of fluoroperovskites 475
– – of organic crystals 491
– – of zinc aluminum eutectic 141
– – theory of 416
– by Czochralski method
– – of aluminium oxide 25
– – of garnets 19
– – of lithium gadolinium molybdate 355
– – of silicon 514
– – theory of 435, 457
– by edge-defined film-fed growth
– – of silicon 74
– by floating zone method
– – of oxides 469
– – of silicon 514, 600
– by Kyropoulos method
– – of lithium gadolinium molybdate 355
– by laser annealing
– – of gallium arsenide 655
– – of silicon 655
– by uniaxial solidification
– – of copper indium eutectoid 85
– theory of 363, 582
Mercury
– (II) iodide 51, 61
Metal films 1
Microgravity 25
Molybdenum oxides 100
Morphological stability 93, 240, 303, 334
Morphology of growth 1, 51, 61, 85, 100, 121, 141, 149, 155, 191, 202, 210, 227, 240, 250, 295, 303, 321, 334, 343, 383, 387, 403, 425, 459, 479, 574, 621

Neodynium
– gallium chromium borate $[Nd(Ga, Cr)_3(BO_3)_4]$ 41
– gallium target 469
Nucleation 121, 383, 387, 574, 589, 621, 644

Optical fibers 491
Organic crystal 491

Perfection of crystals 19, 29, 283, 295, 303, 321, 334, 403, 425, 505, 514, 683
Phase diagrams 85, 114, 367, 379, 574, 600
Phenomenological theory 1
Phosphates 473
Piezoelectrics 530
Poly
– acrylonitrile 202
– benzoates 191

– esters 184
– ethylene 169, 240, 250, 283, 295, 303, 321, 343
– ethylene oxide 210
– peptides 259
–propylene 169, 303
–vinylidene fluoride 334, 343
Polymers 169, 184, 191, 202, 210, 240, 250, 259, 303, 334, 343, 574
Polymorphism 334
Polytypism 107

Quartz 530

Radius of gyration 169
Rubidium
– tin halides 155

Selenium 227
Segregation coefficient 114, 363, 435
Semiconductors 611, 655
Silicon 74, 379, 514, 600, 644, 655
Silver
– niobate 493
– tantalate 493
Sodium
– chlorate 425
– chloride 9
Solid growth
– by recrystallization
– – of lithium gadolinium molybdate 355
– – of polyethylene oxide 210
– – of polyvinylidene fluoride 334
– – of tin
– by strain anneal
– – of polyethylene 240
– – of polyvinylidene fluoride 334
Solid solutions 611
Solution growth
– by complex formation at low temperatures
– – of sparingly soluble crystals 45, 51, 61
– by flux method
– – of calcium oxide 459
– – of laser material 41
– – of lithium ferrite aluminate 114
– – of silver niobate 493
– – of silver tantalate 493
– by gel method
– – of alkali tin halides 155
– – of lead chloride 149
– by hydrothermal growth
– – of phosphates 473
– by low temperature method
– – of cadmium iodide 107
– – of gypsum 34
– – of polymer crystals 574
– – of sodium chlorate 425
– – during polymerization
– – – of polyacrylonitrile 202
– – – of polypeptides 259
Spirals 574
State of the art – electronic materials 505
Stefan problem 411
Step 9, 621
Strain 114, 303, 683
Striations 514
Supercooling, supersaturation 114, 121, 131, 227, 574, 589, 621
Surface acoustic wave (SAW) 530
Surface area 563
Surface energy, determination of 121, 321
Surface processes, theory 9, 489, 621

Thermodynamics 93, 107, 131, 359, 563, 574, 635
Thin film growth
– by liquid phase epitaxy
– – of indium phosphide 403
– – of laser material 41
– – of lead tin telluride 383
– – of lithium ferrite aluminate 114
– – of III–V compounds 411
– – of YIG, substituted 131, 621
– – theory of 411, 621
– by sputtering
– – of metals 1
– by vapor phase epitaxy
– – by chemical vapor deposition
– – – of aluminum antimonide 367
– – – of gallium arsenide 644
– – – of silicon 514, 644
– – – theory of 394
– – by evaporation and condensation
– – – of cadmium arsenide 387
Tin 486
Topography 683

Vapor growth
– by chemical transport
– – of cadmium germanium phosphide 479
– – of gallium indium arsenide phosphide 359
– – of selenium 227
– by evaporation and condensation
– – of cadmium iodide 107
– – of cadmium telluride 29
– – of ice 121
– – of selenium 227
– by oxidation
– – of molybdenum oxides 100

Waveguide 41
Whitlockites 473

Yttrium
– aluminum garnet 469, 621
– aluminum garnet, substituted 131
– orthoferrite 469

Zinc
– aluminum eutectic 141
